

BushfireReadyGPT

Bushfire Preparedness Planning Draft for Cairns, Queensland – Council Community Resilience Officers, School Safety Leads, and Local Service Partners

DRAFT – NOT EMERGENCY ADVICE – HUMAN REVIEW REQUIRED

Location: Cairns, Queensland

Audience: Council community resilience officers, school safety leads, and local service partners

Generated: 2026-08-30 17:24

Australian Bushfire Preparedness Report

Preparedness planning support only. This document does not provide live fire conditions, fire bans, evacuation orders or life-safety directions. The responsible organisation must review and approve it before formal use. Call 000 in a life-threatening emergency.

Bushfire Preparedness Planning Draft for Cairns, Queensland – Council Community Resilience Officers, School Safety Leads, and Local Service Partners

Generated by BushfireReadyGPT | 2026-08-30 17:24

DRAFT STATUS NOTICE

This report is a preparedness planning draft. It is not emergency advice, does not provide live fire conditions, and does not issue evacuation orders, fire bans or life-safety directions. The responsible organisation must review and approve this draft before formal use. In a life-threatening emergency, call 000.

Safety disclaimer: live warnings, fire bans, evacuation orders and life-safety decisions must come from official emergency services and authorised public information sources.

1. Title

Bushfire Preparedness Planning Draft for Cairns, Queensland – Council Community Resilience Officers, School Safety Leads, and Local Service Partners

2. Executive Summary

This draft preparedness planning report is designed to support the Cairns, Queensland community in preparing for bushfire season. It is intended for use by Council community resilience officers, school safety leads, and local service partners. The report is a draft and requires human review and approval before formal use. It does not provide live emergency direction and must not be used to issue evacuation orders, fire bans, or life-safety directions. The responsible organisation must review and approve this draft before it is used operationally. In a life-threatening emergency, call 000.

3. Purpose and Scope

This draft covers the application-recognised council community preparedness scenario. It includes evacuation planning, communication, smoke exposure, roles and responsibilities, official source information, and human review and approval. The purpose is to provide a structured framework for community resilience and safety during bushfire season. This draft is not intended to provide live emergency direction.

4. Selected Geography and Key Assumptions

The selected geography for this draft is the Cairns, Queensland area, which includes the following key assumptions:

- The report is based on the 2021 SA2 names and population data from the ABS Data by Region.
- The report uses the ASGS SA2/SA3/SA4 reference details.
- The report assumes the use of official Queensland emergency services and warning systems.
- The report acknowledges that the candidate assembly points require local verification before use.

5. Data Sources and Limitations

- [01][source_id=qfd_qfes] Queensland Fire Department / QFES
- [01][source_id=get_ready_qld_bushfire] Get Ready Queensland – Current Bushfire Incidents

The application retrieved this static official passage as preparedness-planning evidence for human review. [01-RAG][source_id=qld_evacuation_plan] Evacuation plan

- ABS Data by Region: The data is from the 2021 Census and 2022 ERP fields, which are aging planning baselines.
- ASGS Allocation/Correspondence Files: These files are official geography reference data, not live emergency information.
- Official Source Registers: The report includes 7 official entry-point reference sources (01) and 2 static official RAG passages (01-RAG).
- Data Year: The data is 4 years old, and the SA2 grouping is an approximation.
- Limitations: The report must be reviewed and updated with current official or organisational data before operational use.

6. Local Risk Context

The local risk context for Cairns includes:

- Bushfire: The community should account for official warning systems, changing fire weather, and local disaster coordination.
- Smoke and Health Risk: The community should consider tropical heat, smoke exposure, heavy rain or severe weather interactions, and road disruption.
- Road and Power: Power and communications outages can affect alerts, refrigeration, lighting, welfare checks, and access to official warning information.
- Community Vulnerability: The community should include vulnerable residents, transport support, multilingual communication, pets, and household readiness.

7. Preparedness Priorities

The highest-priority preparedness actions for the selected scenario include:

- Evacuation planning
- Communication and warning channels
- Smoke and health risk
- Roles and responsibilities

- Official information sources
- Human review and approval

8. Evacuation Planning

The evacuation planning process involves:

- Step 1 – Research: Check with the local council and library for information on potential hazards, local warning systems, evacuation process, and nominated evacuation routes. Identify support agencies and contact details.
- Step 2 – Record Details: Identify a safe place to evacuate to, such as family or friends living in secure accommodation further inland on higher ground. Record contact and location details. Create a checklist for everything needed before evacuating.
- Step 3 – Prepare Your Evacuation Kit: Gather essential supplies, including first aid, food, water, and emergency documents. Keep the kit in a sturdy, easy-to-carry bag or waterproof storage box.

9. Candidate Assembly Point Criteria

Criteria for candidate assembly points include:

- Secure and accessible location
- Adequate shelter and facilities
- Proximity to essential services
- Clear signage and communication
- Adequate space for assembly and movement

10. Roles and Responsibilities

Record 1

Role	Preparedness Lead
Responsible Organization	Council
Staff	Yes
Volunteers	No
Communications	Yes
First Aid	Yes
Review	Yes

Record 2

Role	Evacuation Coordinator
Responsible Organization	Council
Staff	Yes
Volunteers	No
Communications	Yes
First Aid	Yes
Review	Yes

Record 3

Role	Assembly Point Manager
Responsible Organization	Council
Staff	Yes
Volunteers	No
Communications	Yes
First Aid	Yes
Review	Yes

Record 4

Role	Community Liaison
Responsible Organization	Council
Staff	Yes
Volunteers	No
Communications	Yes
First Aid	No
Review	Yes

Record 5

Role	First Aid Provider
Responsible Organization	Council
Staff	Yes
Volunteers	No
Communications	Yes
First Aid	Yes
Review	Yes

Record 6

Role	Emergency Information Officer
Responsible Organization	Council
Staff	Yes
Volunteers	No
Communications	Yes
First Aid	No
Review	Yes

11. Communication and Inclusion Needs

- Internal Communication: Regular updates and drills to ensure staff and volunteers are prepared.
- Public/Parent Communication: Clear and accessible information through multiple channels, including social media, local media, and community meetings.
- Multilingual Needs: Provide plain-language and multilingual communication for warnings, drills, and parent/community updates.

- Backup Channels: Ensure multiple communication channels are available, including text messages, social media, and local radio.

12. First Aid, Training and Exercises

- First Aid: Provide first aid training for staff and volunteers.
- Smoke/Heat Exposure: Develop a plan to support people with health vulnerabilities during smoke and heat exposure.
- AED/Burn Response: Ensure access to Automated External Defibrillators (AEDs) and burn response equipment.
- Drill Frequency: Conduct regular evacuation drills and first aid training exercises.
- Exercise Records: Maintain records of all drills and exercises for review and improvement.

13. Action Plan

Day	Action	Responsible Person	Review Checkpoint
1	Assign the responsible preparedness lead to verify official contacts, action owners, and review checkpoints.	Council	To be confirmed by the responsible organisation / official source.
2	Develop and distribute evacuation plans to all households and businesses.	Council	To be confirmed by the responsible organisation / official source.
3	Identify and verify candidate assembly points with responsible officers.	Council	To be confirmed by the responsible organisation / official source.
4	Train staff and volunteers on evacuation procedures and first aid.	Council	To be confirmed by the responsible organisation / official source.
5	Conduct a community-wide evacuation drill.	Council	To be confirmed by the responsible organisation / official source.
6	Review and update communication plans based on feedback from the drill.	Council	To be confirmed by the responsible organisation / official source.

14. Human Review and Approval Checklist

- [] Verify all official contact information.
- [] Confirm candidate assembly point criteria with responsible officers.
- [] Ensure all evacuation plans are distributed to households and businesses.
- [] Train staff and volunteers on evacuation procedures and first aid.
- [] Conduct a community-wide evacuation drill.
- [] Review and update communication plans based on feedback from the drill.
- [] Obtain final approval from the responsible organisation.

15. Safety Disclaimer

Live warnings, fire bans, evacuation orders, and life-safety decisions must come from official emergency services. Call 000 in life-threatening emergencies.

Evidence Tables

These tables are generated from local pipeline outputs to support human review and audit traceability. They are not live emergency data.

Evidence Confidence and Provenance

Evidence codes describe provenance and required review. They are not fire danger ratings, live incident severity levels or promises of legal or operational reliability.

Code	Evidence class	Confidence / use boundary	Required review
01	Official-source reference	High source authority, but this report does not confirm currency, completeness or operational applicability.	Open the official source and verify current information before use.
P2	Processed official-origin data	Moderate and context-dependent; processing, aggregation and geographic matching can introduce limitations.	Check source year, transformation method, coverage and selected geography.
R3	Deterministic rule inference	Indicative and reproducible, but dependent on configured rules and input matching; it is not observed incident evidence.	Validate the inference with local officers, plans and current conditions.

Code	Evidence class	Confidence / use boundary	Required review
A4	AI-generated draft synthesis	Not an evidence source. Model-generated narrative can omit, simplify or invent details.	A responsible human must verify every operational claim before approval.
U0	User-provided / unverified context	Unverified unless supported by organisational records or an official source.	Confirm inputs with the responsible organisation.

Current report application

- 01 Official-source reference: 7 official entry-point reference(s) selected; 4 static official RAG passage(s) retrieved from verified index aa8e42d3d783 using dense_bm25_rrf_v1
- P2 Processed official-origin data: Community context: Cairns, Queensland; Community profile loaded from data_australia/processed/community_profiles.csv: ABS Data by Region / Digital Atlas of Australia SA2 population and people layer (2021 Census and 2022 ERP fields).
- R3 Deterministic rule inference: 3 configured rule(s) matched: queensland_general, cairns_local, community_scenario
- A4 AI-generated draft synthesis: The configured language model produces the narrative draft after deterministic analysis.
- U0 User-provided / unverified context: Location: Cairns, Queensland; audience: Council community resilience officers, school safety leads, and local service partners

Evidence Table 1: Selected Geography

Field	Value	Source / note
User location	Cairns, Queensland	[U0] Form input; confirm with the responsible organisation
Inferred state / territory	Queensland	[R3] Profile Agent text inference
Selected ASGS level	To be confirmed	[P2] Local processed ABS ASGS allocation reference
Selected ASGS area	To be confirmed	[P2] Map selection matched to local ASGS reference
SA2 rows in selected area	To be confirmed	[P2] To be confirmed
SA3 reference	To be confirmed	[P2] Processed ABS ASGS hierarchy
SA4 reference	To be confirmed	[P2] Processed ABS ASGS hierarchy
GCCSA reference	To be confirmed	[P2] Processed ABS ASGS hierarchy
Albers area	To be confirmed	[P2] Processed ABS ASGS allocation area field

Evidence Table 2: Community Indicators

Indicator	Value	Source / note
Matched community profile	Cairns, Queensland	[P2] Processed geographic match
Population	172888	[P2] ABS-origin local processed data
Older people percentage	15.6 %	[P2] Derived from processed ABS-origin fields
Language other than English at home	13.6 %	[P2] Derived from processed ABS-origin fields
Language support need	medium	[R3] Threshold-based interpretation of processed data
Matched SA2 count	22	[P2] Processed geographic aggregation
Transport vulnerability	To be confirmed	[U0] To be confirmed if blank

Evidence Table 2A: Data Currency and Geographic Match

Field	Assessment	Human review requirement
Source period	2021 Census and 2022 ERP fields	Confirm the source period is suitable for the decision
Latest source year	2022	Compare with current official or organisational data
Source age at analysis	4 years	Treat older indicators as a planning baseline
Freshness assessment	Aging planning baseline	Do not infer current conditions from historical indicators
Geographic match quality	Moderate — configured SA2 aggregation	The typed location matched a configured profile built from named SA2 areas; it is not an exact LGA boundary join.
Match method	configured_sa2_names	Confirm the statistical geography matches the operational area

Data quality warnings

- The newest recorded community indicator year is 4 years old; verify material changes with current official or organisational data.
- The configured SA2 grouping is an approximation; confirm boundaries against the current official correspondence or GIS layer.
- Transport vulnerability is unavailable in this profile and requires separate verification.

- Community indicators are planning context only and must not be used as live incident, warning or evacuation data.

Evidence Table 3: LGA 2025 Candidate Reference

Record 1

LGA code	32080
LGA name	Cairns
State / territory	Queensland
Mesh blocks	2414
Albers area	1689.3227 sq km
Source	[P2] data_australia/processed/asgs_allocations/lga_2025_summary.csv

Evidence Table 6: Rule and AI Contributions

Record 1

Contribution	Matched risk rules
Current output	queensland_general, cairns_local, community_scenario
Evidence level / note	[R3] Deterministic configured-rule match; validate locally

Record 2

Contribution	Risk context
Current output	Queensland bushfire planning should account for official warning systems, changing fire weather, and local disaster coordination.; Preparedness plans should separate routine readiness actions from active emergency decisions.; Current fire danger ratings, fire bans, warnings, and evacuation advice must be verified through official Queensland channels.; Cairns planning should consider tropical heat, smoke exposure, heavy rain or severe weather interactions, and road disruption.; Preparedness plans should identify candidate assembly point criteria but must not treat a location as confirmed safe until checked by the responsible organisation and official guidance.; Power and communications outages can affect alerts, refrigeration, lighting, welfare checks, and access to official warning information.; Surrounding vegetation, access roads, visitors, temporary residents, and seasonal population changes should be considered in communication planning.; Community planning should include vulnerable residents, transport support, multilingual communication, pets, and household readiness.; Local council information and state emergency warnings should be used together.; Community plans should define who checks on high-risk residents and how updates are distributed if internet or power fails.
Evidence level / note	[R3] Rule-derived planning context, not observed incident evidence

Record 3

Contribution	Planning priorities
Current output	Confirm official information sources and assign one responsible person to monitor them.; Define evacuation triggers, communication channels, and roll-call responsibilities.; Identify candidate assembly point types and require local approval before treating them as safe.; Prepare first aid, smoke/heat health support, and backup communication arrangements.; Document evacuation decision triggers, assisted movement, accountability and update processes.; Cover official warning monitoring plus primary, accessible and backup communication channels.; Cover smoke and heat exposure controls and support for people with health vulnerabilities.; Assign preparedness, communication, accountability, first aid and review responsibilities.; Identify official verification sources and state when a responsible person must check them.; Keep the report in draft status until responsible human review and organisational approval are recorded.; Include vulnerable residents, transport access, multilingual communication, and neighbour check-ins.
Evidence level / note	[R3] Deterministic planning transformation

Record 4

Contribution	Narrative report body
Current output	Generated by the configured language model
Evidence level / note	[A4] Draft synthesis; not an evidence source and requires human verification

Evidence Table 7: Limitations Requiring Human Review

- The current prototype uses local metadata for official sources and does not read live warning feeds.
- Official websites must be checked for current warnings, fire bans, evacuation instructions, and severe weather updates.
- The newest recorded community indicator year is 4 years old; verify material changes with current official or organisational data.
- The configured SA2 grouping is an approximation; confirm boundaries against the current official correspondence or GIS layer.
- Transport vulnerability is unavailable in this profile and requires separate verification.
- Community indicators are planning context only and must not be used as live incident, warning or evacuation data.
- ASGS allocation files are official geography reference data, not live emergency information.
- LGA boundaries and SA2/SA3/SA4 statistical areas may not align cleanly; operational use needs human GIS review.
- The tool is not connected to live Queensland warning feeds.
- The report should be treated as preparedness planning support only.
- No live Cairns incident feed is connected.
- Candidate assembly points require local verification before use.
- The report should avoid assigning official authority to volunteers unless the user provides confirmation.
- Semantic similarity is not proof that a passage is current or operationally applicable.
- Hybrid ranking combines dense similarity, BM25 term matching and bounded metadata boosts.

- Retrieved passages are static planning references, not live warnings, incidents or evacuation directions.
- A reviewer must open each cited official source and verify the current page before use.
- Community profile loaded from data_australia/processed/community_profiles.csv: ABS Data by Region / Digital Atlas of Australia SA2 population and people layer (2021 Census and 2022 ERP fields).

Human Review Sign-off

This section records human review status for pilot governance. It does not convert the report into official emergency advice.

Field	Value
Review status	Draft – human review required
Reviewer name	To be confirmed
Reviewer role	To be confirmed
Review date	To be confirmed
Organisation / department	To be confirmed
Identity verification	Not technically verified by this prototype
Notes	To be confirmed

- ☐ Selected geography and community profile have been reviewed.
- ☐ Official source links have been checked by a human reviewer.
- ☐ No live warning, evacuation order, or fire ban has been generated by the app.
- ☐ Candidate assembly points are marked as needing official/local confirmation.
- ☐ The report is treated as a draft until approved by the responsible organisation.
